

Abstract of the Disclosure

A plasma display panel includes a fluorescent layer having a red phosphor pattern, a green phosphor pattern, and a blue phosphor pattern, wherein the red phosphor pattern contains $\text{Y(V,P)O}_4\text{:Eu}$ and $(\text{Y,Gd})\text{BO}_3\text{:Eu}$. The plasma display panel emits red light having an appropriate luminance, improved color purity, and improved afterglow properties.
